Body Weight Smart BWS-XA

BWS-XA is a modern people weighing-machine equipped with colour display and printer with automatic cutter, ideal for the operator who wants to provide, for a very convenient price, a professional quality service, without any technical problem. It measures weight and height and prints a ticket with BMI calculation, that is the way suggested by WHO (World Health Organisation) to assess a person weight condition. A special feature, used for the first time in this scale, is the colour indication of BMI condition, that makes it immediately understandable by customers.

Display with BMI colour indication in digital and analog mode
